

# In-Plant Service Center (IPSC)

Total Safety invented the concept of an on-site, integrated safety equipment and services package called the “In-Plant Service Center” (IPSC).

The IPSC allows us to be on-site 24/7 at our customer location with full-time, trained technicians providing integrated safety solutions to support specific requirements, such as:

- 24/7 Safety Support
- Rental & Sales of PPE - including inspection, maintenance and testing
- Specialized Safety Personnel to ensure compliance during daily and turnaround activities
- Servicing the complete logistical chain by using on-site manned Safety Shops and unmanned distribution platforms (Z-Matic)
- Centralized Confined Space Monitoring Solution (CCSM)
- On-site Safety Trainings
- Full transparency on safety reporting and daily operational safety needs

Managing safety services and equipment from multiple suppliers can be an administrative nightmare with costs that can get out of control. Total Safety can solve this problem with its In-Plant Service Center solution.

With the IPSC solution, we provide Integrated Safety Solutions and supply rental equipment for owners and contractors.

By adopting this solution, costs can be optimized while ensuring best-in-class safety performance.

We have successfully implemented our IPSC solutions on several large refineries and petrochemical plants throughout the world.

To discover our IPSC-approach, please contact your local Total Safety advisor.

## IPSC | Cost Saving Model

Total Safety's IPSC model gives customers the power to maximize asset utilization while minimizing up-front capital costs.

### Cost savings are realized by:

- Elimination of 3rd party mark-up
- Cost-effective deployment of safety staff
- Additional purchase advantages through global presence
- Optimal and cost-effective material availability
- Reduced logistic costs & downtimes

## Your Benefits:

- 24/7 access to consigned safety equipment with less downtime and higher labor productivity as a result.
- Project & turnarounds Support Teams including the full range of safety personnel.
- Reduction of safety issues thanks to the use of safety equipment that has been inspected, tested and calibrated.
- Full compliance program thanks to experienced and certified technicians cross-trained with regulatory and industry standards.
- Extensive and professional infrastructure on-site to support the day-to-day & turnaround operating requirements and on-site safety services.
- Cost reductions thanks to the avoidance of 3rd party mark-up.
- Tracking and accountability for each person/company utilizing equipment with less damages and losses as a result.
- Quality control and documentation for better accountability, accuracy and reliability.
- Better project planning thanks to project-to-date reports on rental costs by equipment type, end-user, project,...
- Clear SLA's defined at the start of the project.
