

Maintenance Management & Certification

Total Safety ensures that your equipment is always correctly maintained in good time, and fully complies with the strictest factory and government regulations.

We coordinate the entire maintenance process, from transport and inspections to repairs and certifications.

We cover both preventative and curative maintenance and supply all contacts with your maintenance partners.

Technical personal protective equipment (PPE):

- Respiratory protection
- Gas detection
- Fall protection
- Protective clothing
- Life-saving appliances
- Fire extinguishers
- Communication
- Ventilation
- ...

Safety and efficiency at work - always

A safer work environment, fewer accidents

Safety equipment maintained correctly and in good time creates safer working conditions and reduces the likelihood of accidents. Your employees can get to work with the right safety equipment and use only materials in perfect condition.

Fewer stoppages, higher productivity

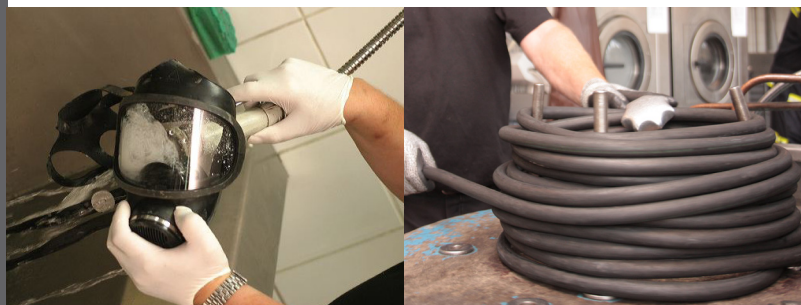

No more delays or stoppages due to materials becoming unusable or defective. You increase the availability of your equipment and the productivity of your people. You also always have sufficient back-up materials.

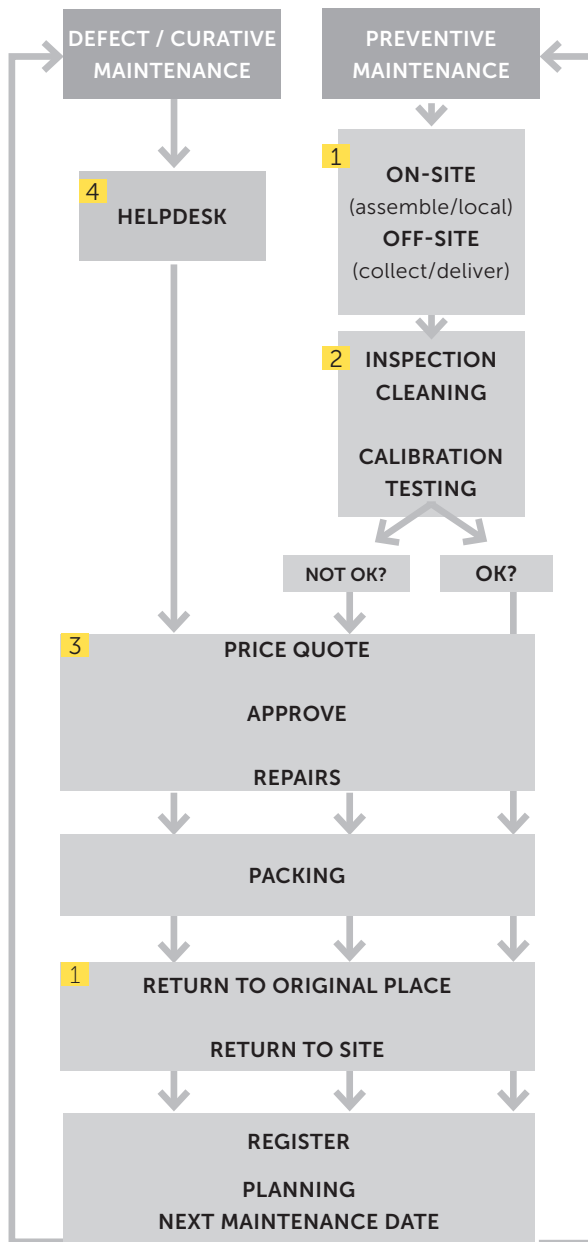

Faster turnaround time, maximal performance

Perfectly maintained materials last longer, become defective less often and are quicker to repair. Your investments then pay off to a maximum and you need fewer back-up materials.

Fully certified, perfectly traceable

You can rest assured that your materials satisfy the most stringent requirements of the manufacturer and the legislator at all times. Status and history are perfectly traceable, and we can always present the necessary certificates and official documents.

One point of contact for the maintenance of all your materials

Inventories and planning

We make an inventory of your materials and decide what maintenance work is needed. All materials are registered in our software system with unique serial numbers and/or RFID tags and regular maintenance dates are planned.

Site management

We make a register of all materials on-site and give each item a unique number (related to the unique serial numbers). The materials are either locally maintained or transported from and to the appropriate workshop.

Reporting

You receive a detailed summary of the maintenance activities carried out. You are always aware of the status and history of all your materials. We also provide a transparent break-down of costs.

1 ALL MATERIALS WHERE THEY BELONG

We collect the materials from your site. We provide the transport to the workshops or carry out the maintenance on-site. We return all materials where they belong.

2 MAINTENANCE & CERTIFICATION

Certified specialists go through all the maintenance steps. We register all actions per object in our system along with the parts used. New certificates are generated after the appropriate checks and tests.

3 REPAIRS

We also take care of any repairs when necessary. Is the price too high? Then we will look for an efficient solution in consultation with you. Your activities will not be impeded thanks to our wide range of back-up appliances.

4 HELPDESK

If you encounter unexpected defects, you can contact our helpdesk day or night. Our service arrangements offer numerous guarantees for an appropriate solution. You determine the service level required yourself.
